

In Tuesday's class, we had a lecture on Neural Networks. Well the topic of the lecture was new to me as I don't know anything about neural networks. It was an interesting introduction and I still have a lot to learn.

In Thursday's class, we didn't cover anything new. Instead we introduced our project topics in class and got feedback. Also, created repositories for the same.

Overall for this week, I feel like I didn't learn much except some new things about the project we are working on(out of class). However, the introduction to neural networks was great.
